

# AFRASH

HPL stands for High Pressure Laminate. HPL cover is actually sheets with different covers that are produced from the combination of cellulose layers and phenolic resins. After exposure to a temperature above 145 degrees Celsius and a pressure of 300 bar, these covers become strong and resistant plates. (HPL) means the same.

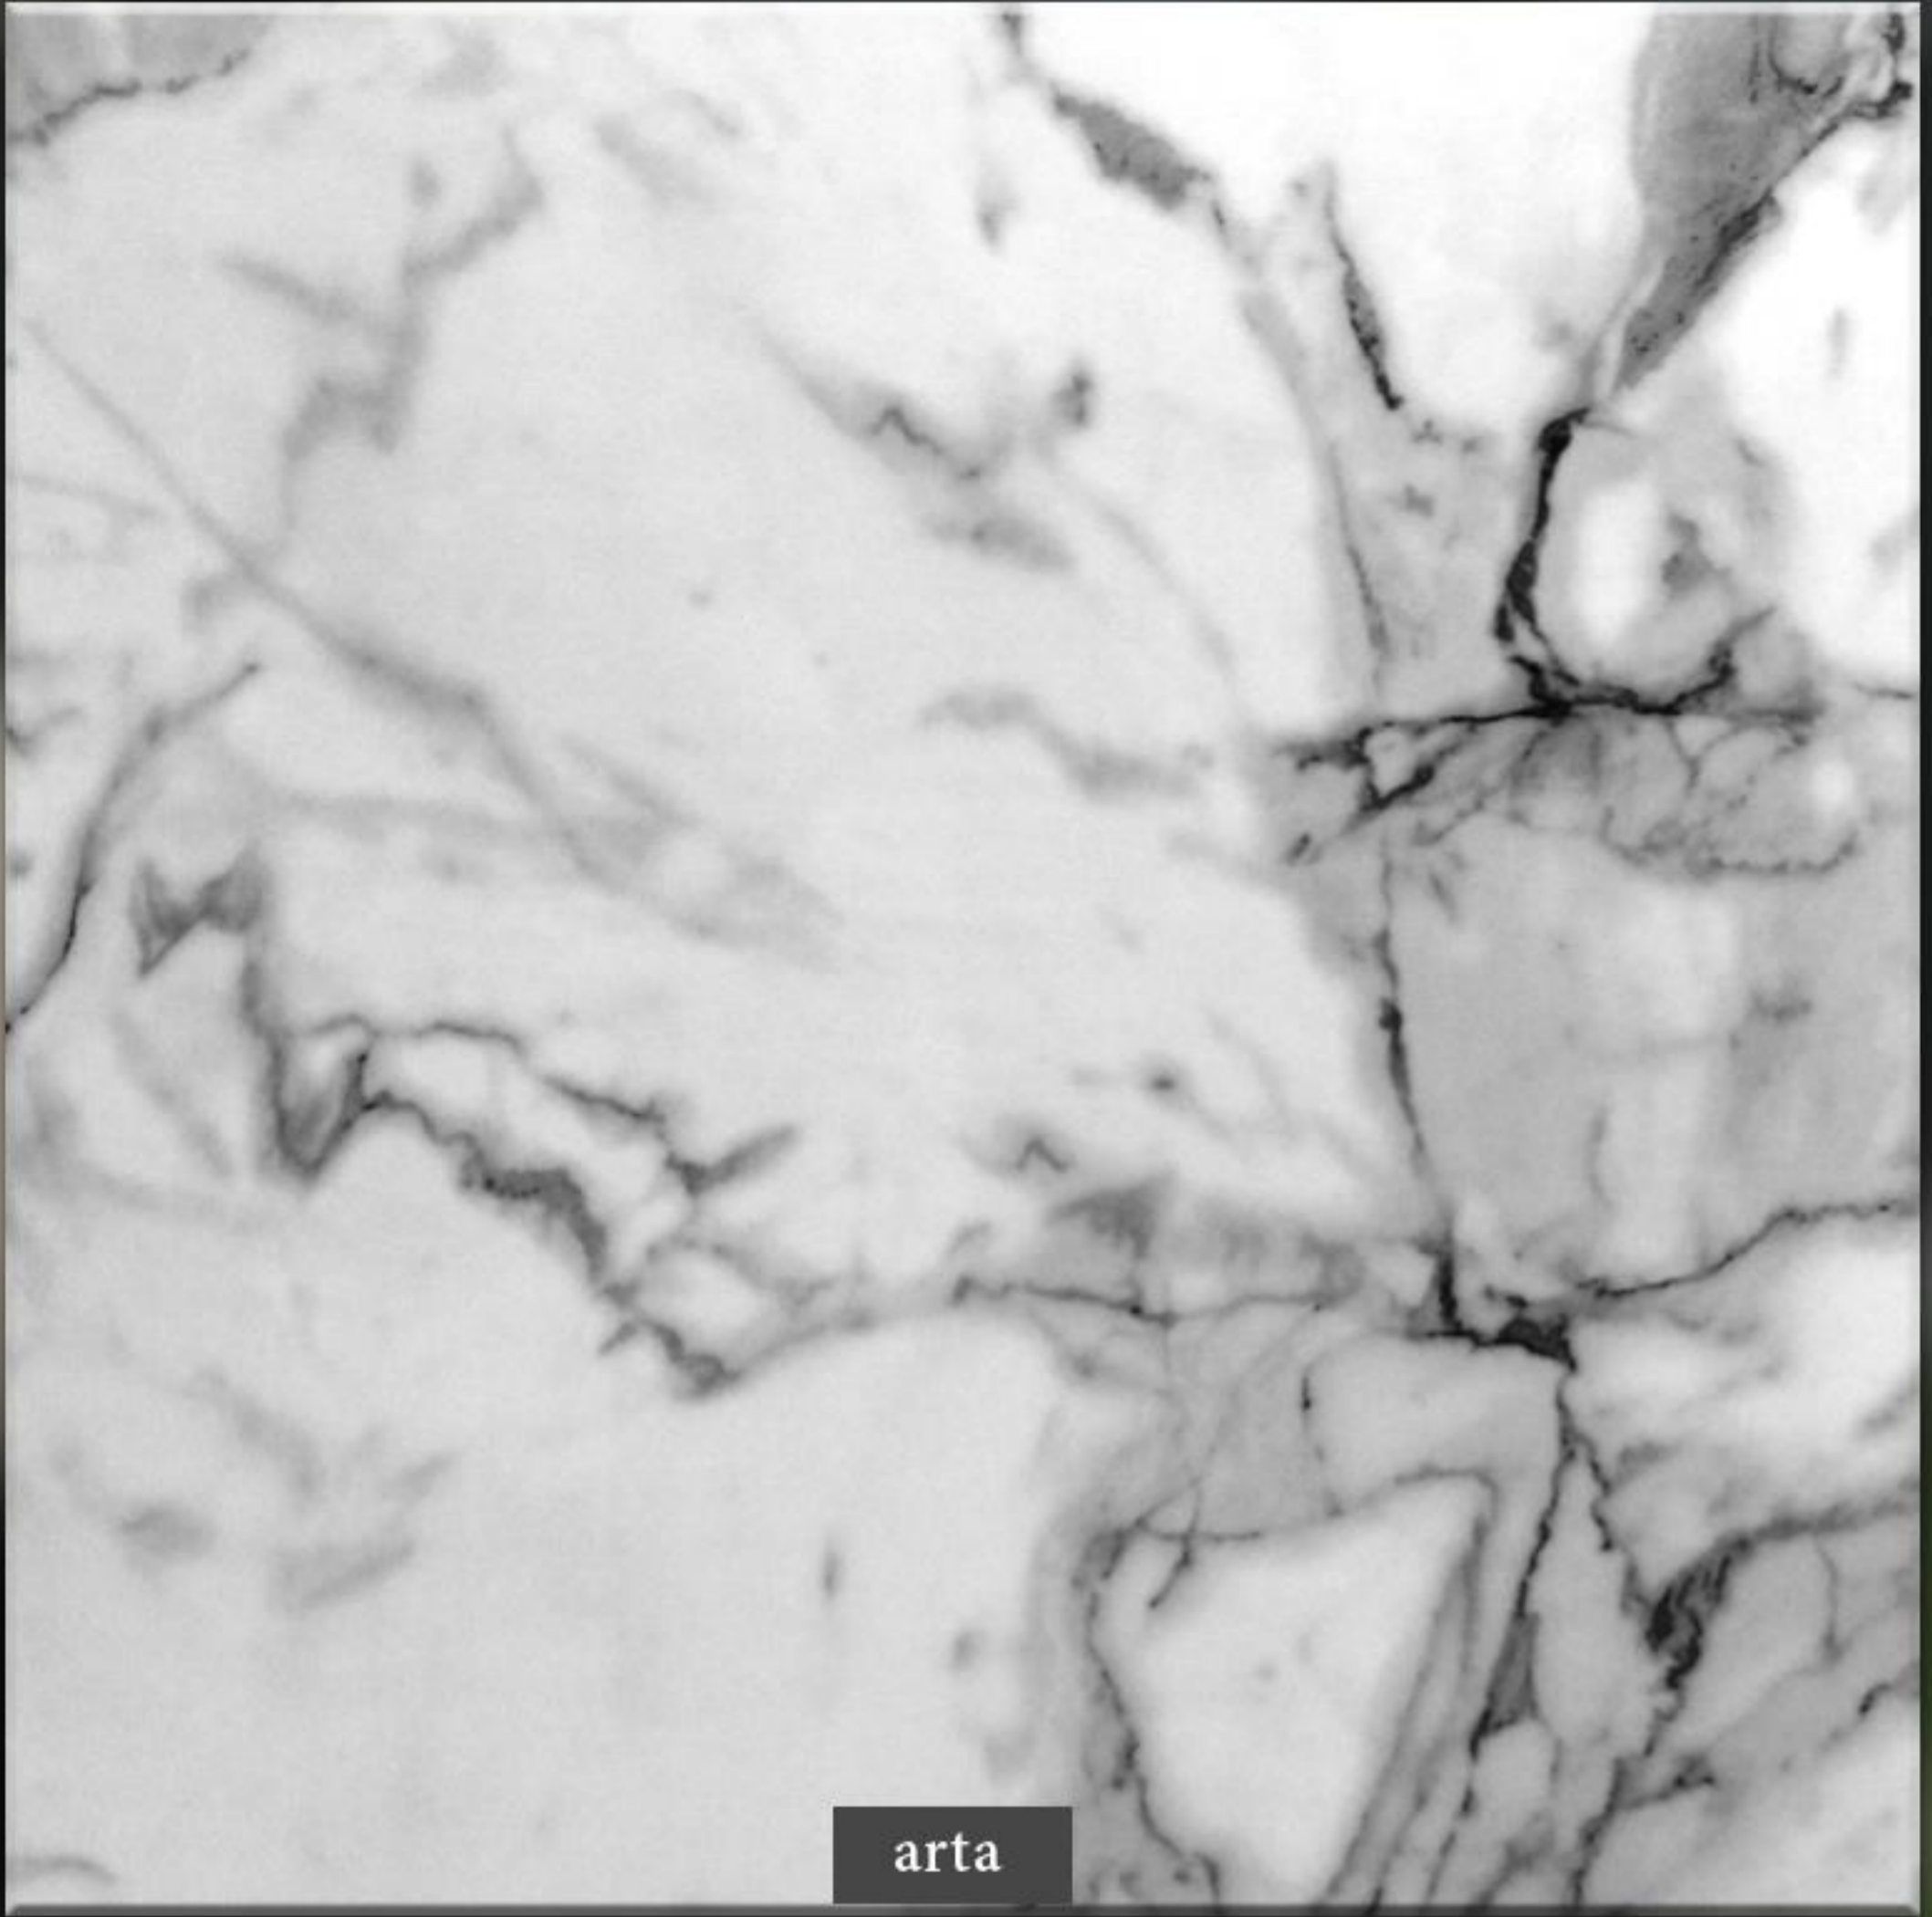

Laminate sheets are created under high pressure and temperature. After exposure to pressure and temperature, colored layers and melamine designs cover its surface. The high resistance of chemicals, their durability and adhesion create a very strong and unbreakable bond between its layers.

You will have many options  
when choosing a counter, kitchen cabinet or facade.

If you are  
thinking of upgrading your desk, home decor or cabinetry  
, HPL veneers may be a good choice.

These coatings are graded like any other product.

Therefore, it is important to get the necessary product from  
manufacturers who have high quality work.

Durability and resistance to erosion and tearing  
are the most important

features of HPL coating. If you can find  
the right use for quality HPL covers,

you won't have to worry about replacing or repairing them for years!
